NHS Safety Thermometer Survey

Date

Pressure Ulcers - Record the Category of the patients worst Old and New pressure ulcers.
Old - a pressure ulcer that was present when the patient came under your care, or developed within 72 hours of admission to your organisation,
New - developed 72 or more hours after the patient was admitted to your organisation.

Patient Falls - Record the severity of any fall that the patient has experienced within the previous 72 hours (3 days) in a care setting, including home if the patient is on a district nursing caseload.

UTI - Treatment for a UTI based on notes, clinical judgement and patient feedback. An Old UTI should be selected if treatment for or diagnosis of the UTI started before the patient was admitted to your organisation.

Catheters - If patient has had a urinary catheter during the last 72 hours (3 days) select the number of days it was in place

VTE Asess - Is there a documented VTE Risk assessment?

VTE Proph - If the patient is at risk, has VTE prophylaxis started?

VTE Treatment - If the patient is being treated for VTE choose the type of VTE. Use Old categories if treatment for the VTE started before admission to your organisation. Use New if treatment for the VTE was started after the patient was admitted to your organisation.
