

Local Service Provider Delivery

The HSCIC manages the delivery and support of electronic patient record systems and services to GPs, hospitals and other NHS care providers in England. The HSCIC also supports NHS organisations to safely exit the national contracts by 2015/16 and to advance productivity, care quality and care integration through their use of information and technology.

66%

of all NHS organisations in England use a patient record system delivered by the HSCIC. The number of staff using these systems would fill London's O2 Arena 26 times.

Digital X-ray and scan systems from the HSCIC have reduced image waiting times from **Weeks to Days**

1,900

clinical systems delivered to GP practices

In London the HSCIC has stored and migrated the largest volume of patient data in Europe

1.3 Petabytes

(2.4 billion X-rays/scans)

Equivalent to the population of London having 139 images each.

140

clinical systems delivered in prisons – that's every prison in England.

"I am thrilled ... by the success of the Trust in improving patient care by implementing the Cerner Millennium system... our patients are benefitting from it every day. Staff both in hospital and the community can make more informed decisions and instantly access all of the information recorded for each patient at the touch of a button."

John Goulston,
Chief Executive,
Croydon Health Services NHS Trust
