

# Systems and Service Delivery

The Systems and Service Delivery (SSD) programme provides best value software development, support and hosting to Department of Health, NHS and social care organisations to deliver over 40 national systems which underpin several key areas of operation within the NHS.

Supporting nurses in the Family Nurse Partnership programme to care for over

# 16,000

at risk, first time young parents, aged 19 or under.

Issuing over **27 million** bowel cancer screening home test kits since 2006, which has led to **21,365** cancers being potentially diagnosed earlier. This is equivalent to the female population of England.

Issues and manages organisation data services code to over **9,000** organisations to support payment for patient services, in every NHS organisation in England.

Managing over

# 7 million

screening invitations per year for breast and cervical cancer programmes, this is almost 20 times as many the number of cases of cancer diagnosed each year in the UK.

GP Patient Registration manages over

# 62 million

patient records including 14.4 million GP changes per year, equivalent to estimated time Britons spend each day on social media (62 million hours a day)

---

“The Cancer Screening Programmes have had a strategic relationship with SSD since the earliest days of the programmes in the 1980s... a rock-solid reputation for delivering the goods on time and to budget, for being flexible and responsive to the rapidly changing policy environment, and for having the kind of ‘can do’ attitude that many claim, but few deliver.”

Mat Jordan

Public Health England
