

NHS Health Check Information Requirements		
Programme Objectives	Key Performance Indicators / Information Requirements	
NHS Health Check: Coverage		
Objective 1: For all those eligible (i.e. those between 40 and 74 who do not have previously diagnosed vascular disease), to be offered a NHS Health Check every five year and for this to be carried out in line with the best practice guidance.	NHS_HC_A1	Number of people aged 40-74 eligible for a NHS Health Check
	NHS_HC_A2	Number of eligible people who have been offered a NHS Health Check
	NHS_HC_A3	Number of eligible people who have received a NHS Health Check
	NHS_HC_A4	% of eligible cohort who have been offered a NHS Health Check
	NHS_HC_A5	% of eligible cohort who have received a NHS Health Check
NHS Health Check: Referrals and Risk Management		
Objective 2: That the NHS Health Check programme is clinically and cost effective, and that it remains so. Objective 3: Help people live longer, healthier lives by: i. reducing the risk, and incidence, of heart attacks and strokes, type II diabetes and chronic kidney disease ii. detecting cardiovascular disease, chronic kidney disease and type II diabetes earlier, allowing people to be managed earlier and in doing so improve their quality of life.	NHS_HC_B1	% of eligible cohort receiving an NHS Health Check that were provided with stop smoking information and advice
	NHS_HC_B2	% of eligible cohort receiving an NHS Health Check that were signposted to smoking cessation services
	NHS_HC_B3	% of eligible cohort receiving an NHS Health Check that were referred to smoking cessation services
	NHS_HC_B4	% of eligible cohort receiving an NHS Health Check that were provided with general lifestyle advice
	NHS_HC_B5	% of eligible cohort receiving an NHS Health Check that required an assessment for IFG/IGT lifestyle management
	NHS_HC_B6	% of eligible cohort receiving an NHS Health Check that were given a brief intervention in physical activity
	NHS_HC_B7	% of eligible cohort receiving an NHS Health Check that were signposted to physical activity services
	NHS_HC_B8	% of eligible cohort receiving an NHS Health Check that were referred to physical activity services
	NHS_HC_B9	% of eligible cohort receiving an NHS Health Check that were signposted to weight management services
	NHS_HC_B10	% of eligible cohort receiving an NHS Health Check that were referred to weight management services
	NHS_HC_B11	% of eligible cohort receiving an NHS Health Check that were prescribed statins
	NHS_HC_B12	% of eligible cohort receiving an NHS Health Check that were prescribed anti-hypertensives
	NHS_HC_B13	% of eligible cohort receiving an NHS Health Check that were offered a referral to smoking cessation services
	NHS_HC_B14	% of eligible cohort receiving an NHS Health Check that were offered a referral to physical activity services
	NHS_HC_B15	% of eligible cohort receiving an NHS Health Check that were offered a referral to weight management services
	NHS_HC_B16	% of eligible cohort receiving an NHS Health Check that did not have an assessment for IFG/IGT lifestyle management
	NHS_HC_B17	% of eligible cohort receiving an NHS Health Check that were provided with weight management information and advice
	NHS_HC_B18	% of eligible cohort receiving an NHS Health Check that required an assessment for diabetes
	NHS_HC_B19	% of eligible cohort receiving an NHS Health Check that did not require an assessment for diabetes
	NHS_HC_B20	% of eligible cohort receiving an NHS Health Check that required an assessment for serum creatinine
	NHS_HC_B21	% of eligible cohort receiving an NHS Health Check that did not require an assessment for serum creatinine
	NHS_HC_B22	% of eligible cohort receiving an NHS Health Check that required an assessment for hypertension
	NHS_HC_B23	% of eligible cohort receiving an NHS Health Check that did not require an assessment for hypertension
	NHS_HC_B24	% of eligible cohort receiving an NHS Health Check that required an assessment for fasting cholesterol
	NHS_HC_B25	% of eligible cohort receiving an NHS Health Check that did not require an assessment for fasting cholesterol

NHS Health Check Information Requirements		
Programme Objectives	Key Performance Indicators / Information Requirements	
NHS Health Check: Outcomes		
Objective 2: That the NHS Health Check programme is clinically and cost effective, and that it remains so.	NHS_HC_C1	% of eligible cohort receiving a NHS Health Check diagnosed with type II diabetes
	NHS_HC_C2	% of eligible cohort receiving a NHS Health Check diagnosed with chronic kidney disease
Objective 3: Help people live longer, healthier lives by: i. reducing the risk, and incidence, of heart attacks and strokes, type II diabetes and chronic kidney disease	NHS_HC_C3	% of eligible cohort receiving a NHS Health Check diagnosed with hypertension
	NHS_HC_C4	% of eligible cohort receiving a NHS Health Check diagnosed with non- diabetic hyperglycaemia
	NHS_HC_C5	% of eligible cohort receiving a NHS Health Check with a cardiovascular disease risk score
NHS Health Check: Health Inequalities		
Objective 1: For all those eligible (i.e. those between 40 and 74 who do not have previously diagnosed vascular disease), to be offered a NHS Health Check every five year and for this to be carried out in line with the best practice guidance. Objective 3: Help people live longer, healthier lives by: i. reducing the risk, and incidence, of heart attacks and strokes, type II diabetes and chronic kidney disease ii. detecting cardiovascular disease, chronic kidney disease and type II diabetes earlier, allowing people to be managed earlier and in doing so improve their quality of life. Objective 4: Reduce health inequalities – including socio-economic, ethnic and gender inequalities that result from vascular disease (heart disease, stroke, type II diabetes and chronic kidney disease).	NHS_HC_D1	Number of people aged 40-74 by gender, ethnicity and lower super-output postcode eligible for a NHS Health Check
	NHS_HC_D2	Number of eligible people by gender, ethnicity and lower super-output postcode who have been offered a NHS Health Check
	NHS_HC_D3	Number of eligible people by gender, ethnicity and lower super-output postcode who have received a NHS Health Check
	NHS_HC_D4	% of eligible cohort by gender, ethnicity and lower super-output postcode who have been offered a NHS Health Check
	NHS_HC_D5	% of eligible cohort by gender, ethnicity and lower super-output postcode who have received a NHS Health Check
	NHS_HC_D6	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode who were provided with general lifestyle advice
	NHS_HC_D7	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode provided with stop smoking information and advice
	NHS_HC_D8	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode signposted to smoking cessation services.
	NHS_HC_D9	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode referred to smoking cessation services
	NHS_HC_D10	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode given a brief intervention in physical activity
	NHS_HC_D11	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode signposted to physical activity services.
	NHS_HC_D12	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode referred to physical activity services
	NHS_HC_D13	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode signposted to weight management services
	NHS_HC_D14	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode referred to weight management services
	NHS_HC_D15	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode that required an assessment for IFG/IGT lifestyle management

NHS Health Check Information Requirements

Programme Objectives	Key Performance Indicators / Information Requirements	
	NHS_HC_D16	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode prescribed statins
	NHS_HC_D17	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode prescribed anti-hypertensives
	NHS_HC_D18	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode who were diagnosed with type II diabetes
	NHS_HC_D19	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode who were diagnosed with chronic kidney disease
	NHS_HC_D20	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode who were diagnosed with hypertension
	NHS_HC_D21	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode who were diagnosed with non diabetic hyperglycaemia
	NHS_HC_D22	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode offered a referral to smoking cessation services
	NHS_HC_D23	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode offered a referral to physical activity services
	NHS_HC_D24	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode offered a referral to weight management services
	NHS_HC_D25	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode that did not have an assessment for IFG/IGT lifestyle management
	NHS_HC_D26	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode that were provided with weight management information and advice
	NHS_HC_D27	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode that required an assessment for diabetes
	NHS_HC_D28	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode that did not require an assessment for diabetes
	NHS_HC_D29	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode that required an assessment for serum creatinine
	NHS_HC_D30	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode that did not require an assessment for serum creatinine
	NHS_HC_D31	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode that required an assessment for hypertension
	NHS_HC_D32	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode that did not require an assessment for hypertension
	NHS_HC_D33	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode that required an assessment for fasting cholesterol
	NHS_HC_D34	% of those receiving a NHS Health Check by gender, ethnicity and lower super-output postcode that did not require an assessment for fasting cholesterol
